KINAXIS®

KNOW SOONER. ACT FASTER.

Integration Layer
for Kinaxis RapidResponse

Imagine, no need to use multiple solutions – just one layer for all your integration needs.

To simplify and accelerate the integration of business systems with Kinaxis® RapidResponse®, we offer pre-built integrations for SAP ECC and the ability to integrate your other data sources leveraging standard connectors.

The Integration Layer for RapidResponse is a secure cloud integration solution that enables you to integrate data from various sources, both internal and external, with RapidResponse. Now you can easily create, deploy and maintain your data integration so you can quickly realize the value of your RapidResponse investment.
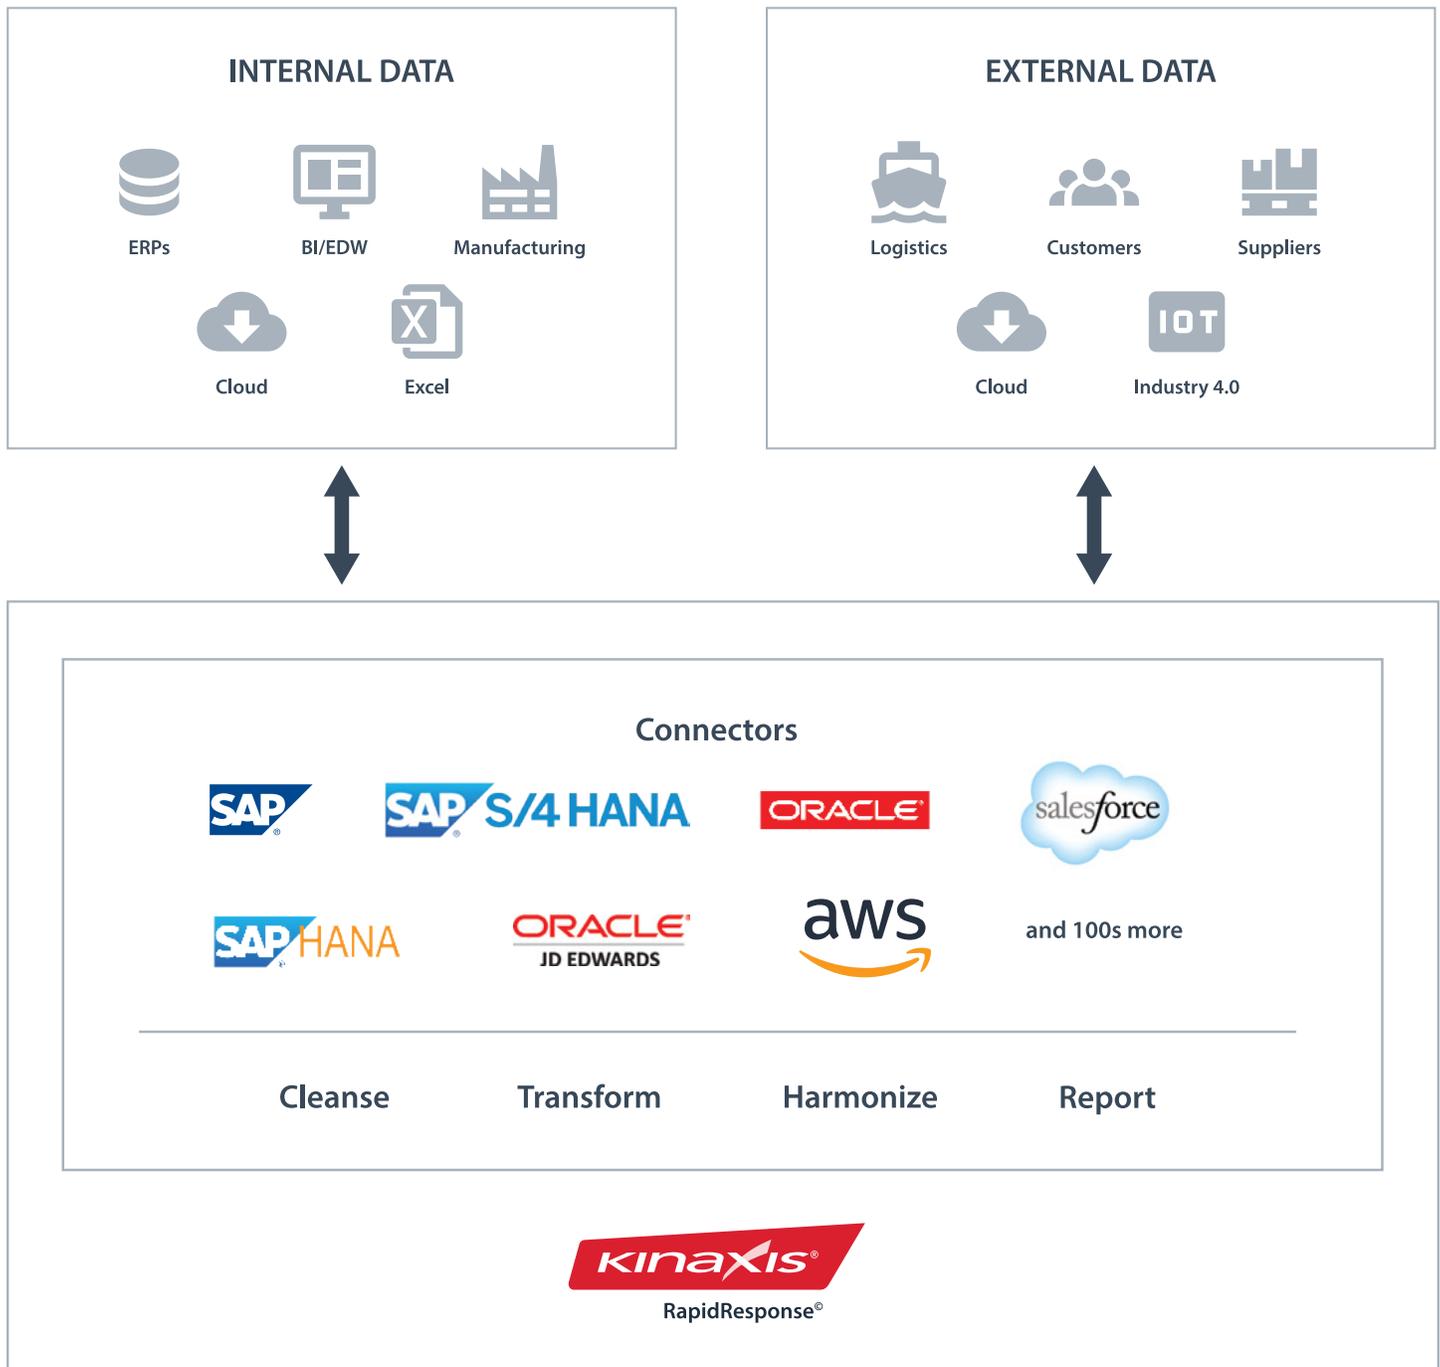

Imagine, no need to use multiple solutions – just one layer for all your integration needs.

Highlights

▶ A single integration layer for all data sources required by RapidResponse

▶ Pre-built integrations for SAP and standard connectors for a multitude of data sources

▶ An IT-friendly solution for easy administration and support

A single layer for RapidResponse integration

A single layer enables the integration of bulk and transactional data to and from internal and external sources.

INTERNAL DATA

ERPs   BI/EDW   Manufacturing

Cloud   Excel

EXTERNAL DATA

Logistics   Customers   Suppliers

Cloud   Industry 4.0

Connectors

SAP   SAP S/4 HANA   ORACLE   salesforce

SAP HANA   ORACLE JD EDWARDS   aws   and 100s more

Cleanse   Transform   Harmonize   Report

Key capabilities

A single integration solution hosted by Kinaxis

The Integration Layer for RapidResponse is a single solution designed for authoring, processing and executing data integration workflows. The layer simplifies integrations, helping you get started with RapidResponse faster. As a cloud-based layer, it's easy and non-invasive for IT – we host everything you need for project storage and source control, transformation processing and administration.

Pre-built integrations

SAP-certified process templates mean you don't have to start from scratch. Templates highlight the data we require from your source systems and how it needs to be transformed for integration with RapidResponse. You can extend and reuse process templates to adapt mappings and transformations for your unique integration with RapidResponse.

Data connectivity

Our solution offers standard connectivity to many data sources, plus fast and broad coverage of traditional and modern data sources, including SAP, Oracle and Salesforce. With the breadth of connectors offered, you'll find the ideal connector for your integration needs.

Author data integration workflows

The layer includes a toolkit with visual drag and drop functionality to simplify the design, testing, management and monitoring of your integration jobs and workflows.
