

What are your supply chain pain points?

As production rates fluctuate, part families consolidate and the pressure is on to keep costs and prices down, aerospace and defense companies can struggle to plan effectively for their supply chains.

KNOW SOONER, ACT FASTER WITH KINAXIS®

Using a single planning platform, Kinaxis unifies your supply chain planning to streamline your processes, break down silos and plan concurrently across every area of your supply chain – from S&OP to demand, inventory, supply, capacity and more.

Fine-tune plans for engineering changes

You can test the impact of engineering changes before they happen and time them precisely to avoid excess and shortage conditions.

Integrate data from multiple sources

With all your data on a single platform, plans get sharper, execution systems are in the loop, and your entire supply chain has confidence in its capacity to deliver.

See your supply chain from end to end

Capture all supply chain node data and plan as one network, with full end-to-end visibility in your first 2-3 months.

Simulate rate changes in seconds

See how rate changes could affect your supply chain before implementing and run what-if analyses easily—with broad collaboration to ensure alignment and feasibility.

Easily manage complex BOMs

Balance demand and supply for subordinate products at each stage of production with modeling from component to subassembly to final assembly.

Make collaborative decisions 100X faster with Kinaxis.

Talk to us today and find out how to make your supply chain planning faster, smarter and more efficient.
