

Business Transformation

See your vision clearly for a smooth transformation

Without a clear vision and strategy for your business transformation, your company can face unnecessary risk, costly delays and unwanted hits to your bottom line. We'll make sure that doesn't happen.

Future-proof your supply chain through our Business Transformation service, a dedicated team of Kinaxis® advisors that will coach you on your journey – beginning with a well-defined blueprint designed to drive maximum value as you achieve your long-term business goals.

Begin your transformation journey here

Transform your supply chain for improved business performance and accelerated user adoption. In the Discover phase of the customer value journey, we'll ensure you're ready to start on the right foot through a series of activities, including target setting, supply chain diagnostics, data health checks and actionable recommendations captured in a capability roadmap and release plan.

A blueprint for success

We'll create a Customer Blueprint that includes your supply chain strategy, business processes, solution scope, release plan, industry best practices, user stories, Kinaxis RapidResponse® solution capabilities and target setting for your business transformation program. The blueprint defines the link to value realization and provides an understanding of requirements and the solution for your organization, and the Kinaxis team. It offers the following benefits:

- ▶ Follows best practices as a template to challenge outdated legacy processes
- ▶ Serves as a building block to develop the final solution
- ▶ Acts as a reference for the solution to implement standard operating procedures

During the business transformation design process the industry best practices are mapped to the specific context of your organization, covering people, process and technology, linking the business goals to the capabilities to be developed.

It's all about the data

We'll conduct a Data Assessment to provide you with qualitative and quantitative insights into the current state of your supply chain data in terms of quality, availability and management of data. All of these outcomes are critical for carrying out a successful transformation. The assessment will answer key questions to address your specific business needs, including:

- ▶ What data does my supply chain need and use?
- ▶ What systems does my data exist in and who manages it?
- ▶ What is the current quality of the data?
- ▶ What are the key gaps?
- ▶ What is the business impact of these gaps?
- ▶ How can those gaps be closed?

We're here for you

Count on us to help you realize greater ROI throughout your business transformation. We'll help you tie together supply chain strategy, business processes and solution scope with higher quality planning, reporting and decision-making to ensure a smooth journey.
